

XXXXX Customers:

During our most recent inspection by the State Division of Drinking Water, it was brought to our attention that our water system needed to comply with regulations regarding cross-connection control. A cross-connection is an unprotected actual or potential connection between a potable water system and a non-potable water source or system containing unapproved water or other substances that would not be safe in our drinking water.

Section 7584 of Title 17, California Code of Regulations requires the XXX to protect the water supply from contamination by implementing a cross-connection program. As a first step in implementing a cross-connection program, we must conduct an initial survey to identify water user premises where cross-connections are likely to occur.

While a cross-connection program cannot ensure that our water system will never encounter another bacteriological contamination event, it will significantly reduce the possibility of such a contamination happening in the future. Your participation in this survey will have a direct and positive impact on the quality of water provided to you by the XXX. Thank you for your time in participating in this survey.

Please fill out the survey below and drop it by the office or mail it to:
